Contents

1. Overview

Permission Manager can help administrators manage SharePoint users, groups and permissions on the central platform.

This guide is intended to walk you through the process of installing Permission Manager on your SharePoint server farm.

2. System Requirements

2.1 Operation System

- Windows Server 2008 (x86 and x64)
- Windows Server 2008 R2 (x86 and x64)

2.2 SQL Server

- SQL Server 2008 (x86 and x64)

2.3 SharePoint Versions

Permission Manager can run on the following versions of Microsoft SharePoint:

- Microsoft SharePoint Server 2010
- Microsoft SharePoint Foundation 2010

2.4 Browser Clients

Permission Manager can run on following browsers:

- Microsoft Internet Explorer 8.x and above
- Chrome
- Firefox

2.5 Softwares

- .Net Framework 3.5

2.6 Service Account Requirements

When you install SharePoint BoostSolutions Permission Manager, the account that you use must have specific permissions and rights. If the account that you use does not have the required permissions, the installation will fail.

The account that you use when you install must have the following permissions:

- Domain user account.
- Member of the **Administrators** group in domain.
- Member of the **Domain Admins** group.
- Member of the **Farm Administrators** group.

3. Installation Instructions

3.1 Download Permission Manager

Please skip this step if you already download the product or have been provided with a copy of Permission Manager.

1. Access the product site at http://www.boostsolutions.com

2. Download it to your SharePoint server.

To install the product, the current user must be met these requirements.

Note: The installation should be run on server which is running following services, Microsoft SharePoint Foundation Web Application and Central Administration.

Permission Manager contains four components:

Prerequisites: The prerequisites must be installed before the permission core components.

Permission Core: This is the component that is required for the Permission Manager to work.

Column/View Permission: This is the component that is required for the Permission Manager to manage column and view permission settings.

Column/View Permission for Web Services: This component need to installed for managing column and view permissions on the web services.

The followings show the steps to install all above four components.

3.2 Install Prerequisites

1. To install Permission Core, the prerequisites must be installed first.

   Double click Setup.exe file. Select **Prerequisites**, and click **Install**.
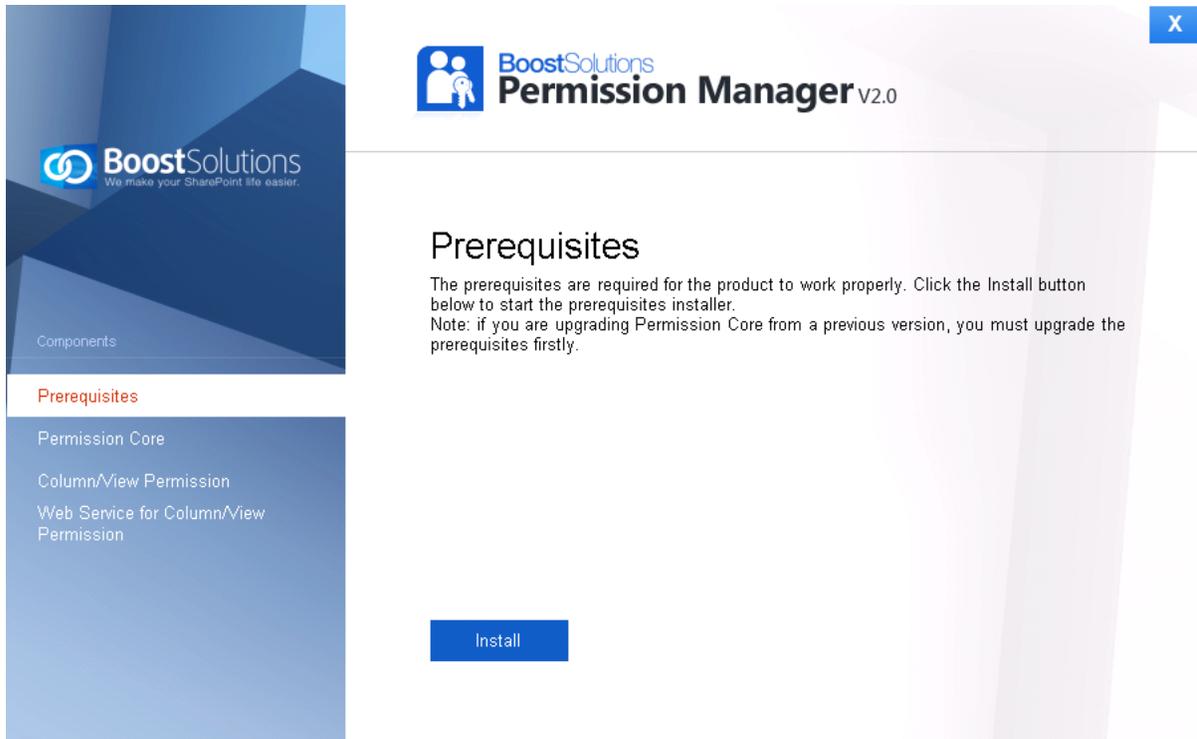

2. When the setup wizard appears, click **Next** button.
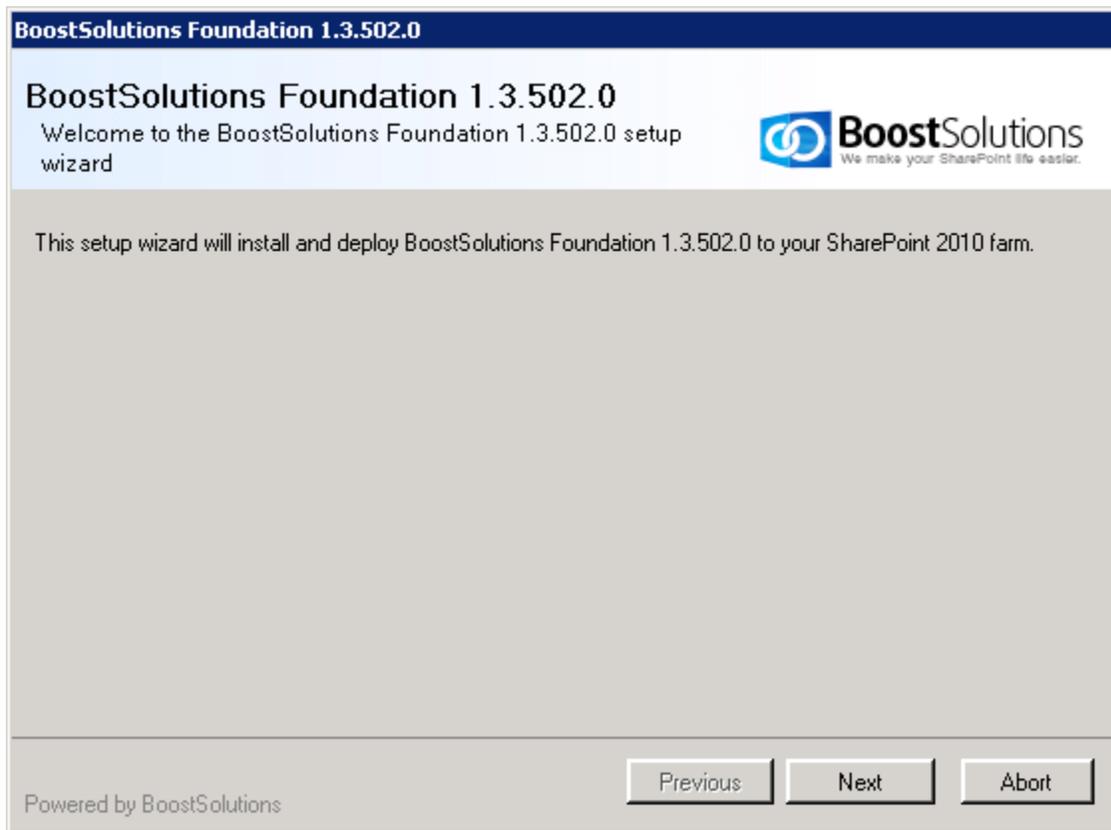

2. Wait the system check complete, and then click **Next**.
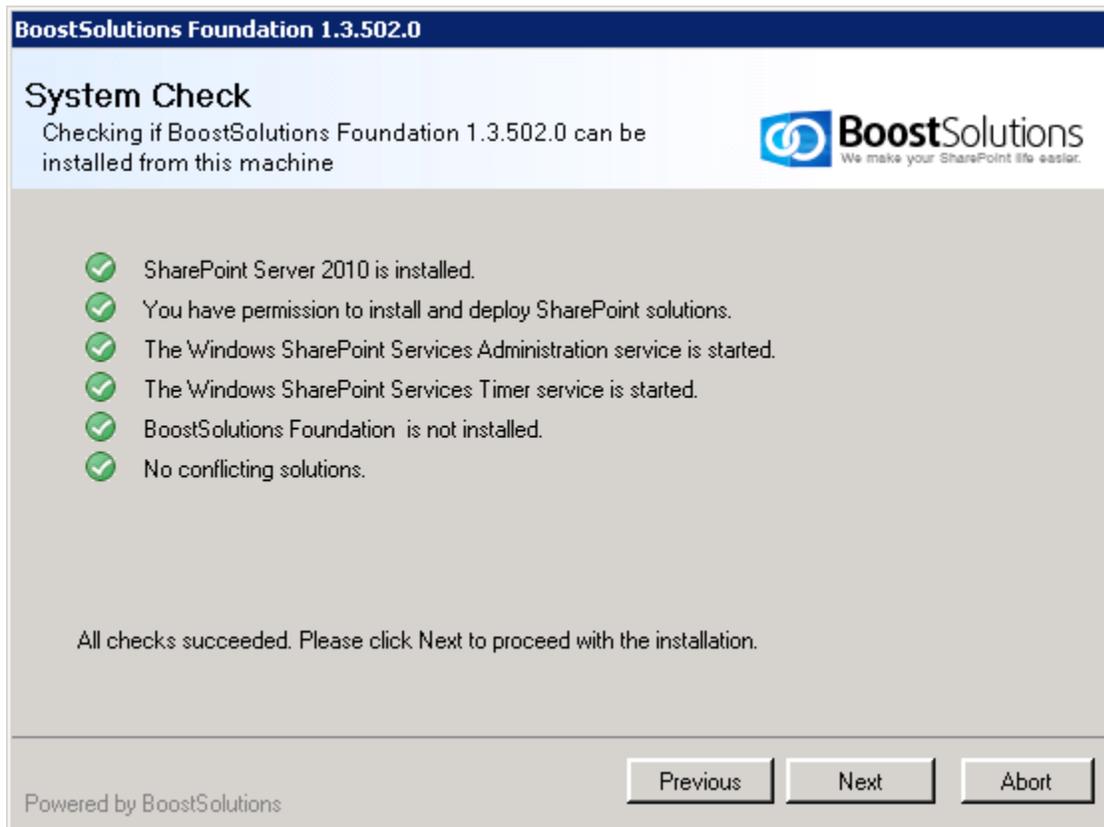

3. Select **I accept the items in the License Agreement**, and then click **Next**.
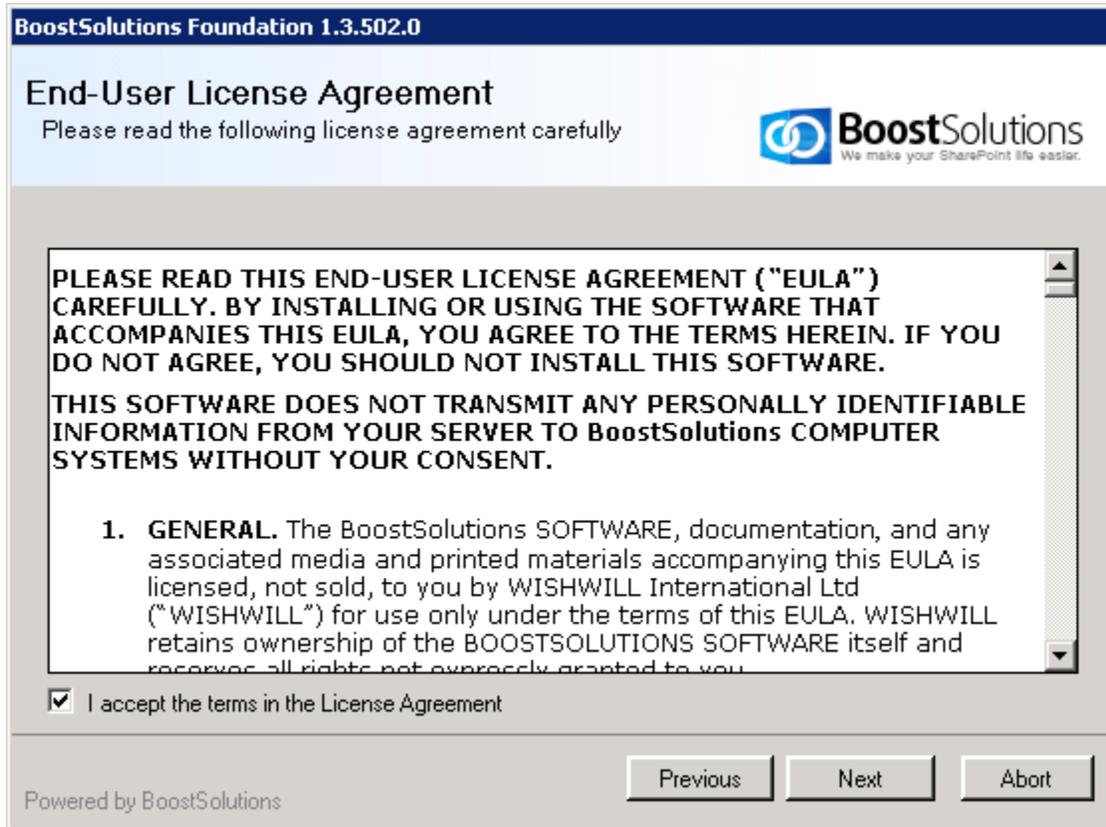

4. In **Web Application Deployment Targets**, Choose the right Web Applications you are going to install on. Then click **Next**.
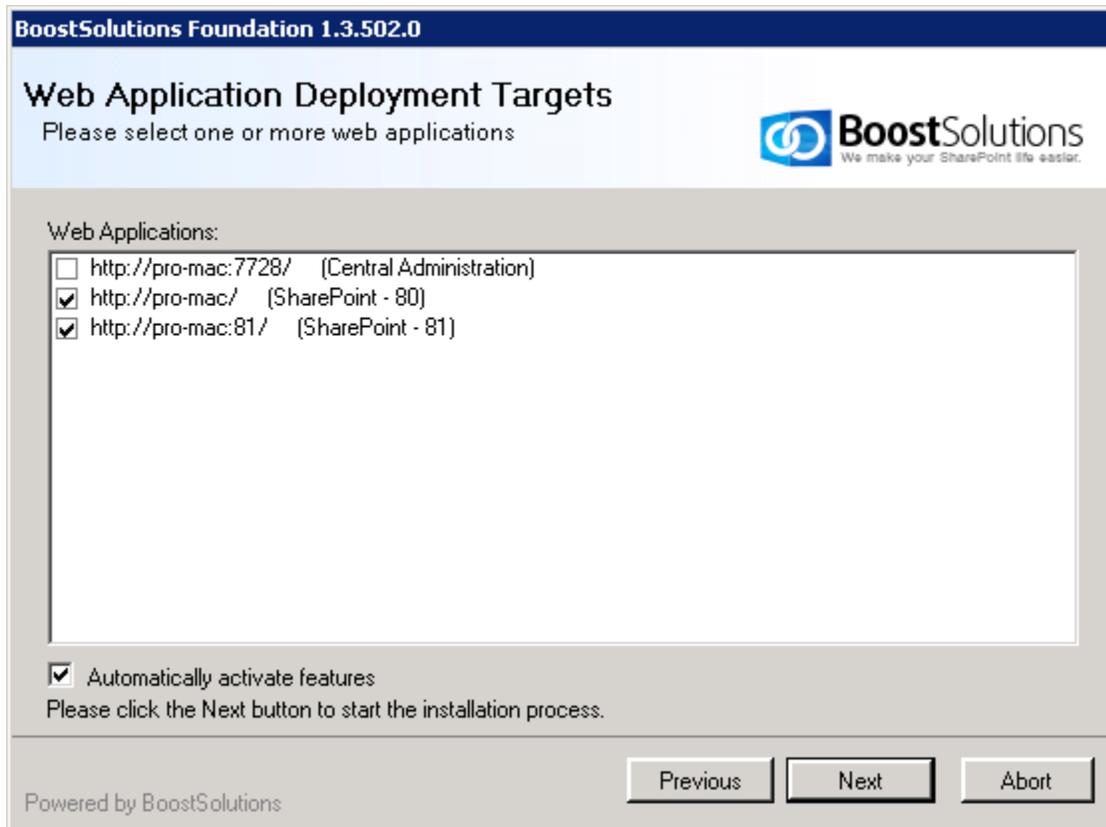

5. Wait installation complete, and click **Next** to continue.
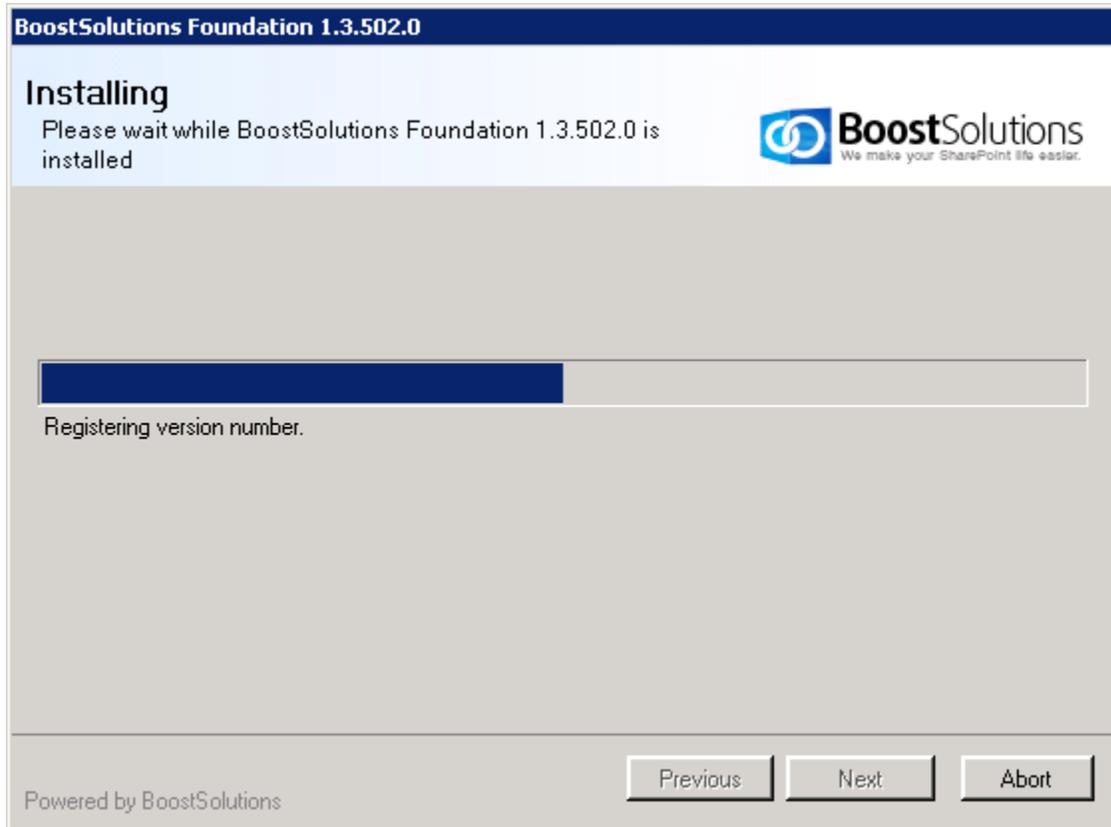

6. After checking the details, click **Close** to finish the installation.
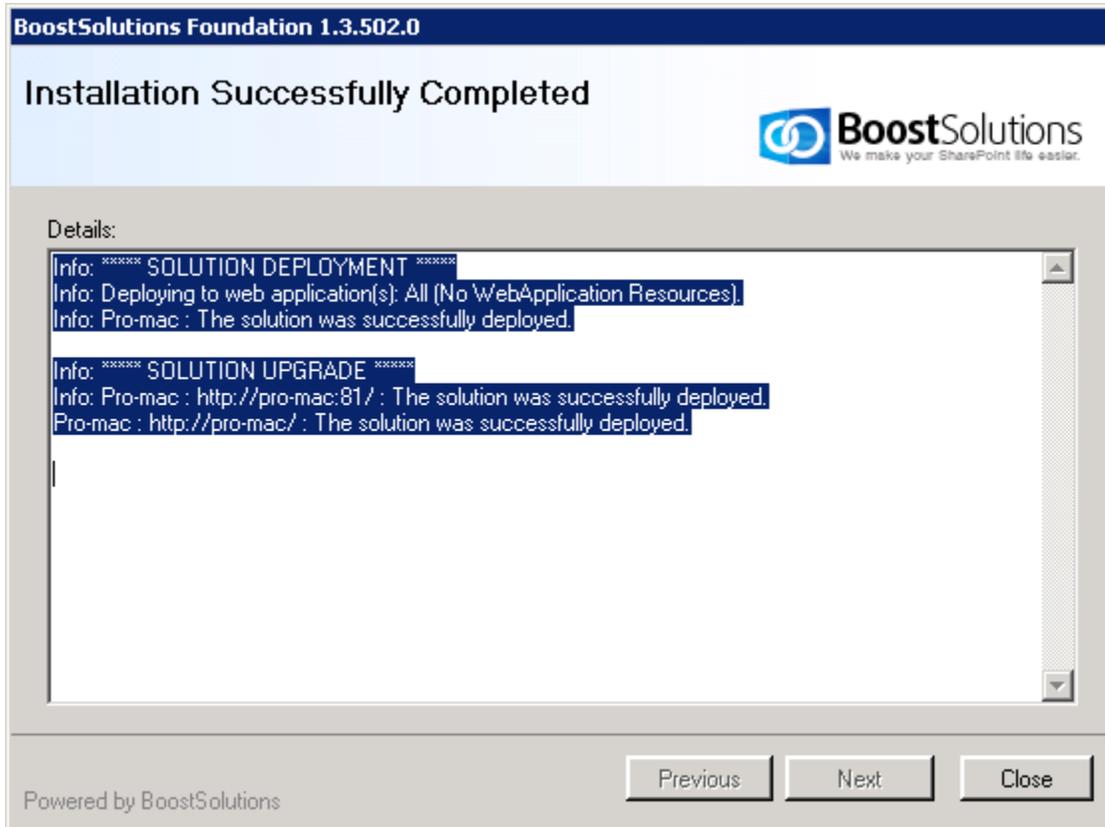

3.3 Install Permission Core

1. After installing the prerequisites, select **Permission Core**, and click **Install**.

2. In the wizard window, click **Next**.
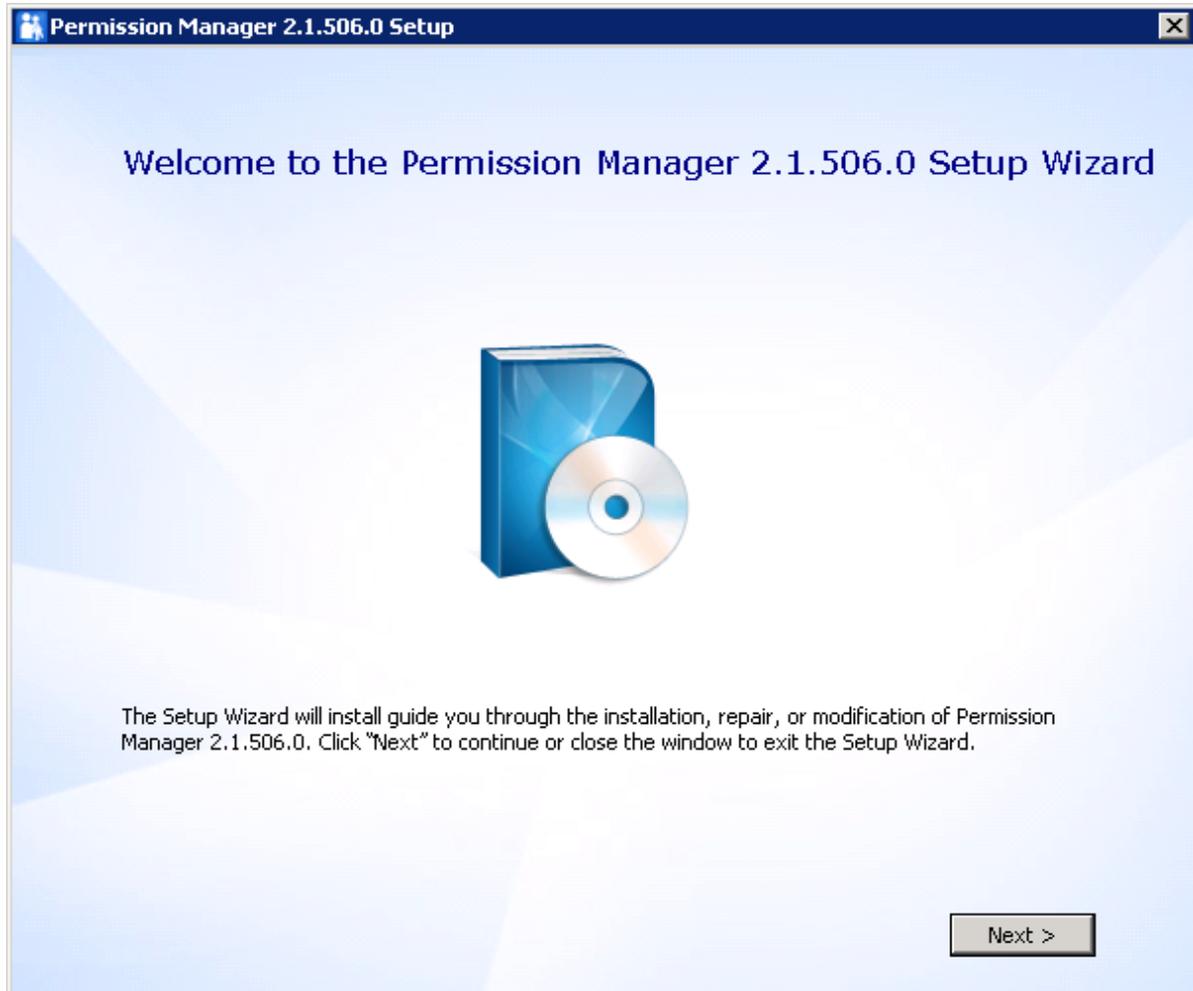

2. Select **I accept the terms in the License Agreement**, and then click **Next**.
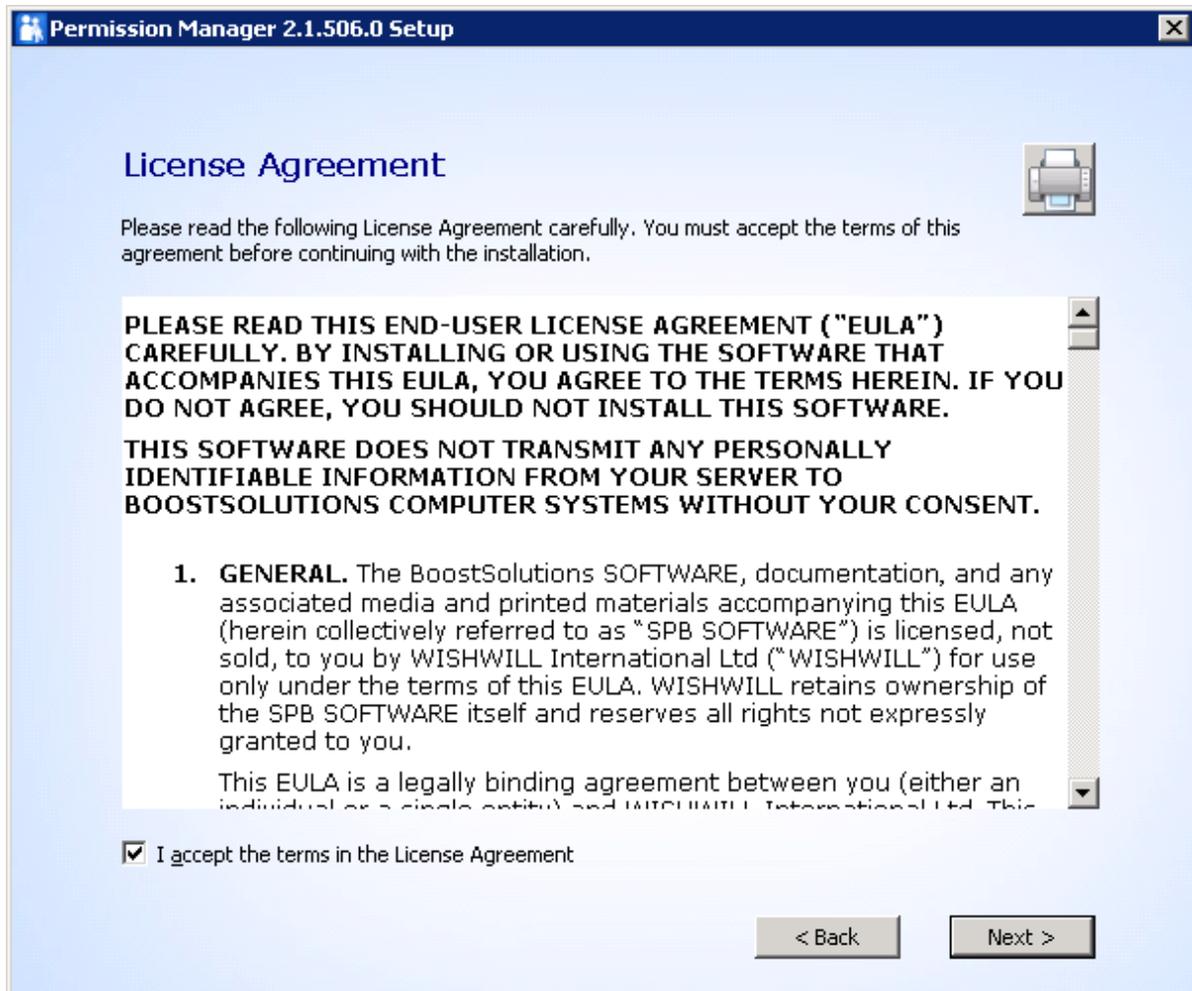

3. In Web Application Configuration window, configure the **IIS Web Site Settings** and **Application Pool Settings**.
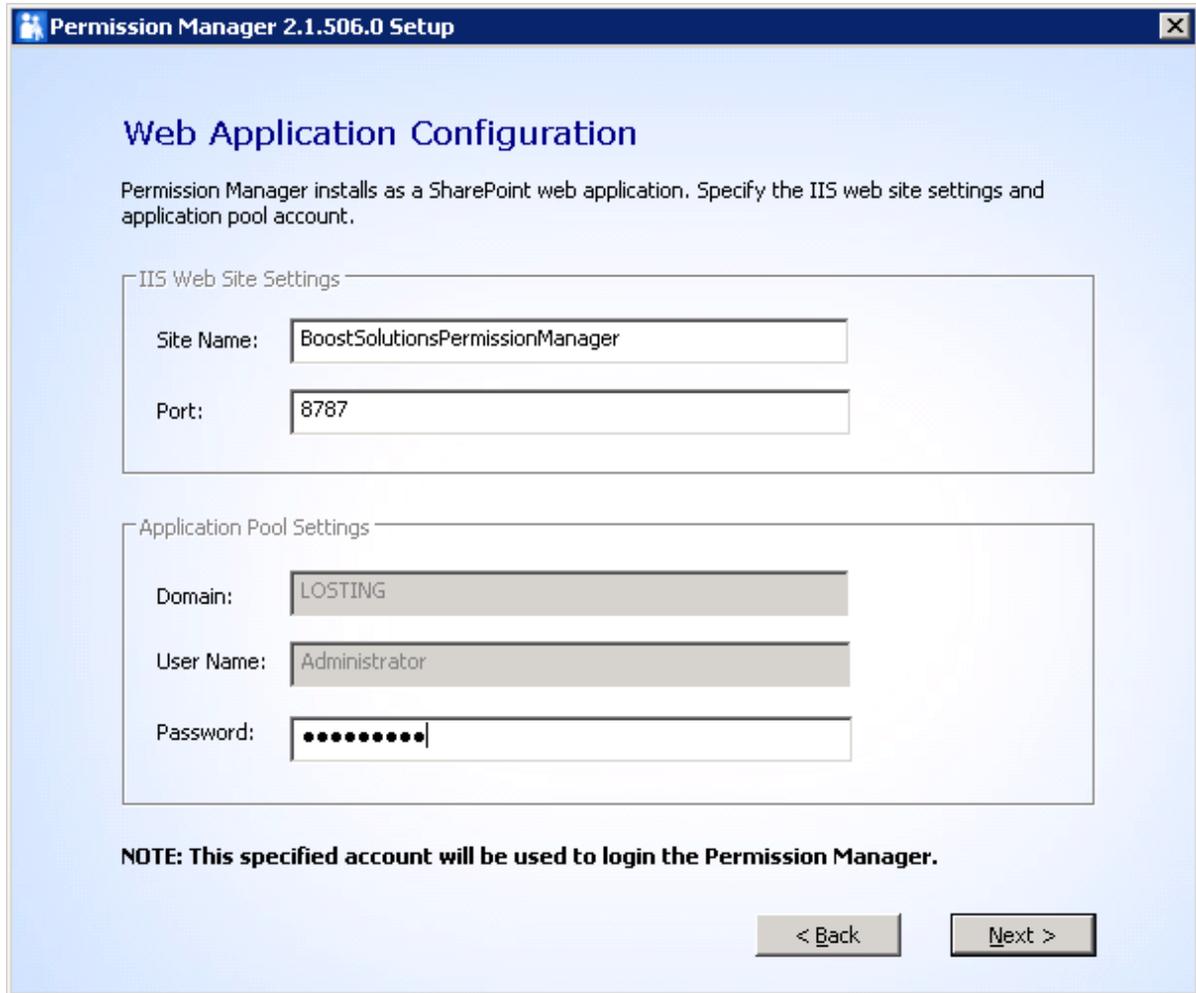

In **IIS Web Site Settings** section, type the Site Name and Port.

By default, the port is 8787. If the port exists, type another one. And then Permission Manager will create a new web application based on the port.

In **Application Pool Settings** section, the domain and user name is entered by default, you just need to type password.

Click **Next**.

4. In Database Configuration window, configure the **Database Settings** and **Authentication**.

In **Database Settings** section, type the Sever Name, Port and Database Name.

Server Name: Type the database server name.

Note:

1. For defaut instance, please type the database server name.

2. If you connect to non-default instance, please type the name as following: *database server\instance name.*

3. If the database and SharePoint are hosted on one server, it is recommend to type the server name here for high speed connectivity.

4. If you have created a SQL server alias on the database server, please type the Server Name as following: *database server name\server alias* or *database server IP\server alias*.

Port: By default, the port is 1433. If your SQL Server port is changed, please type the correct one.

Database Name: Type in any name (for example BoostSolutionsEnterprise). Then Permission Manager configuration data will be saved there.

Specify the authentication, then click **Test Connection** to check if connection success.

Click **Next**.

5. Choose a directory for the installation. The default path is *C:\Program Files(x86)\SharePointBoost\Permission Manager.*
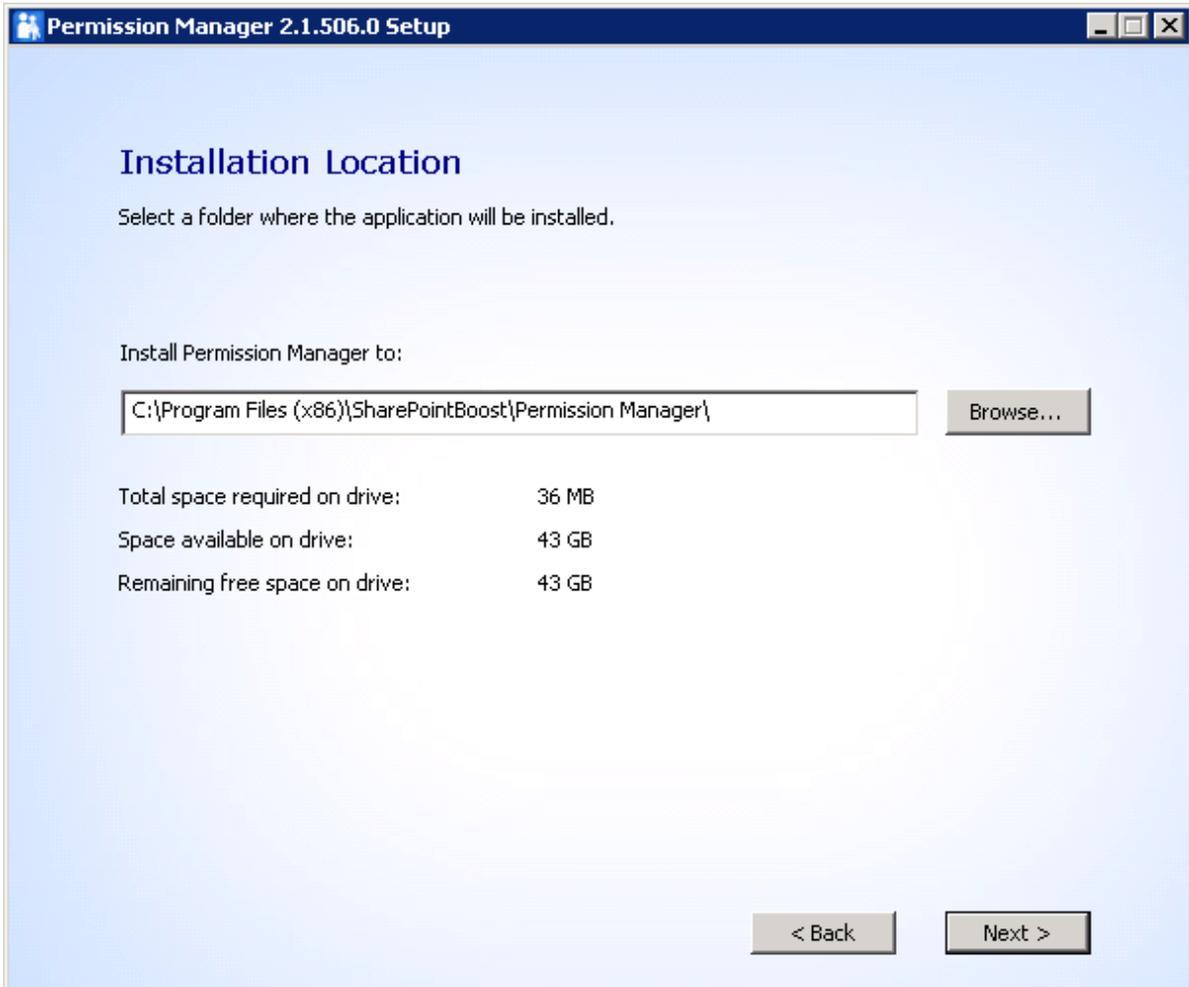

You can select a different location by clicking **Browse**.

Click **Next**.

6. Confirm the installation, and click **Install**.
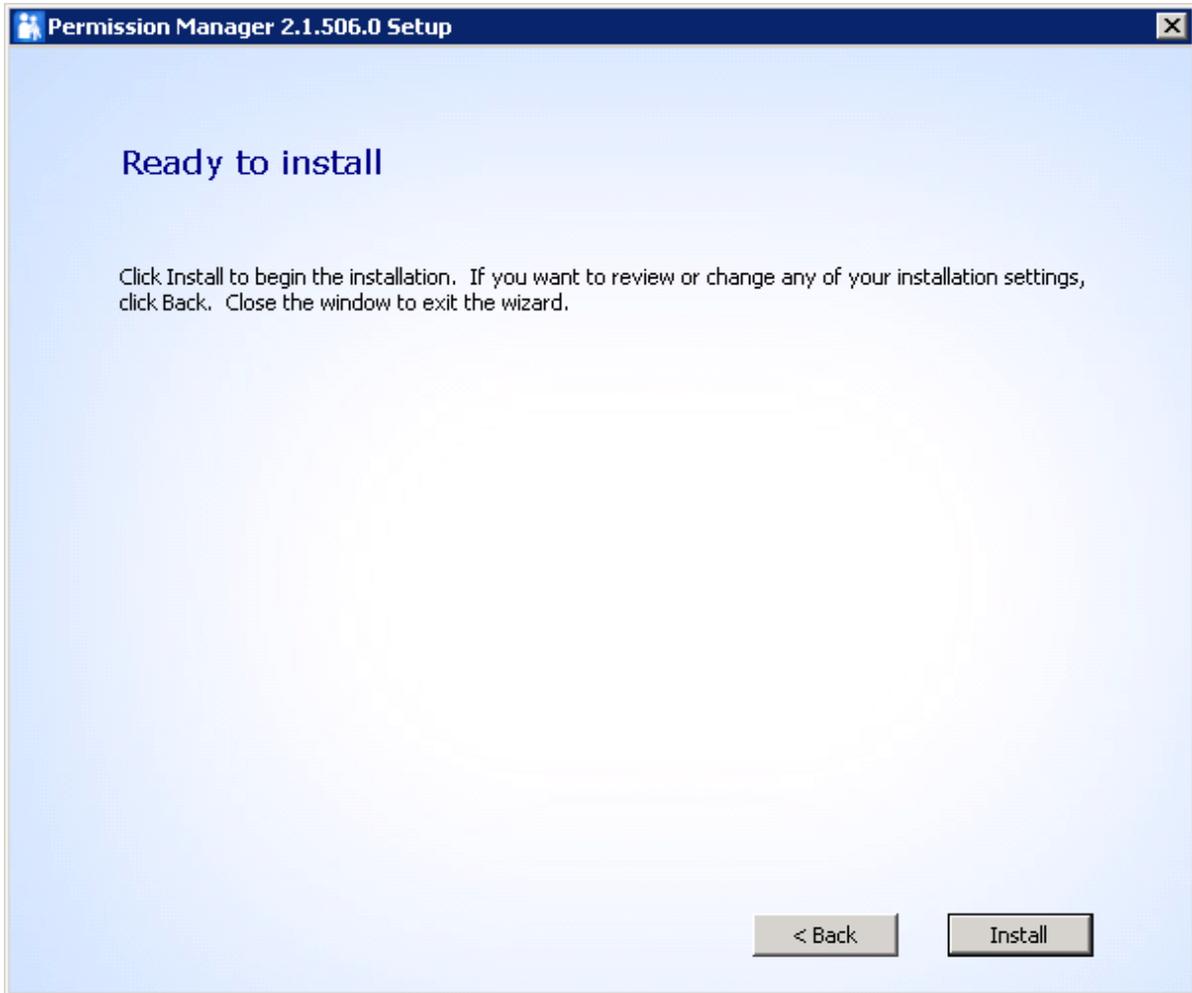

6. Wait installation complete, and click **Close**.

3.4 Install Column/View Permission

1. In Permission Manager install wizard, select **Column/View Permission** and click **Install**.

2. The setup wizard appears, click **Next** button.

3. Wait the system check complete, and then click **Next**.

4. Select **I accept the items in the License Agreement**, and then click **Next**.
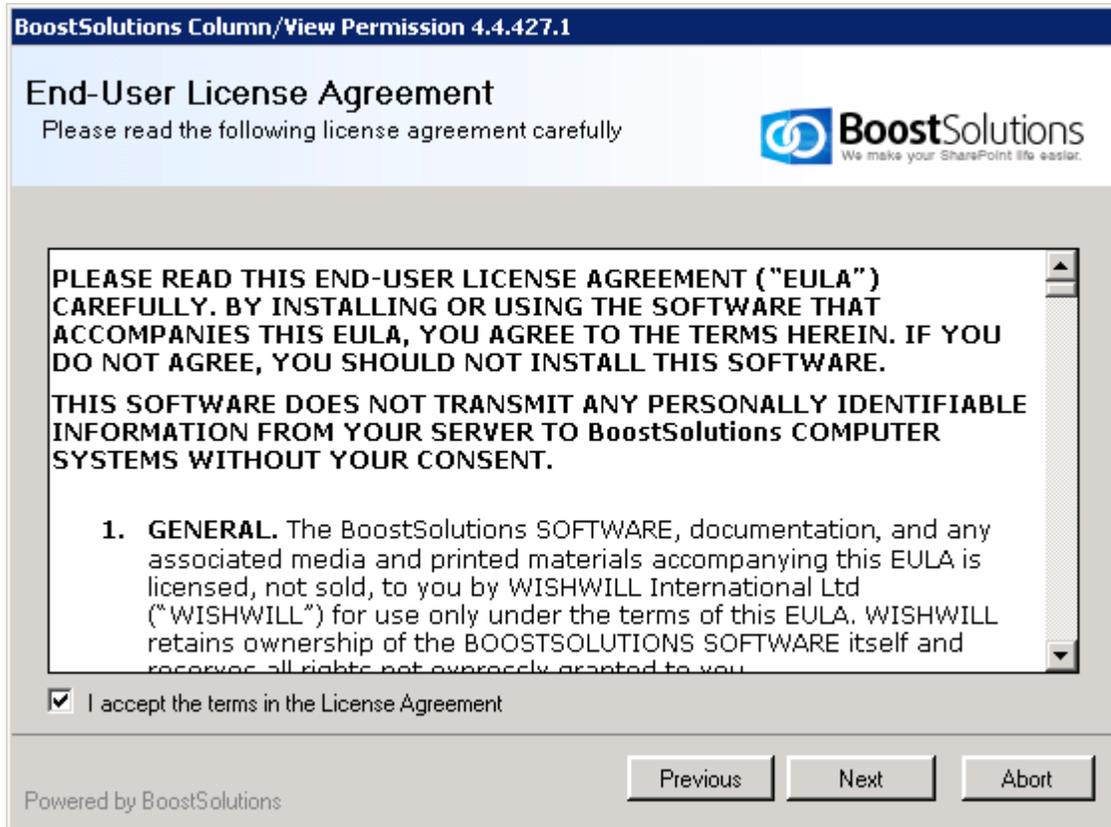

5. In **Web Application Deployment Targets**, Choose the right Web Applications you are going to install on. Then click **Next**.
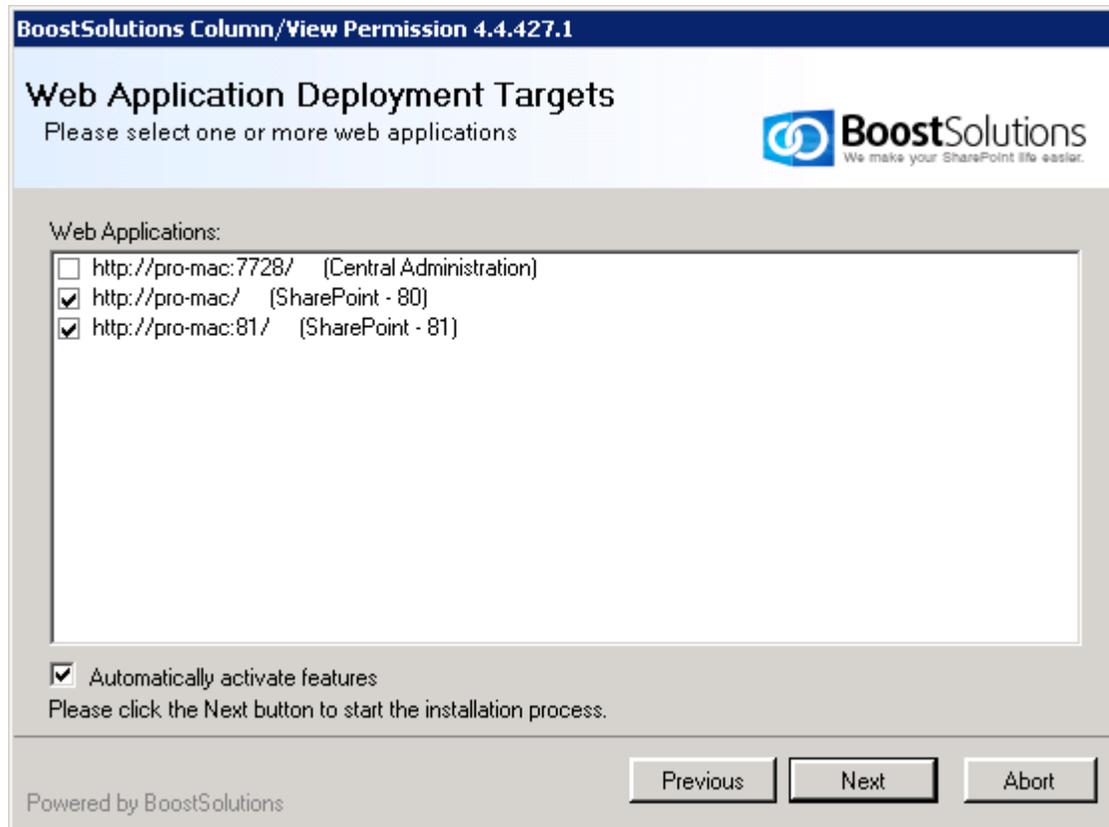

6. Wait installation complete, and click **Next** to continue.
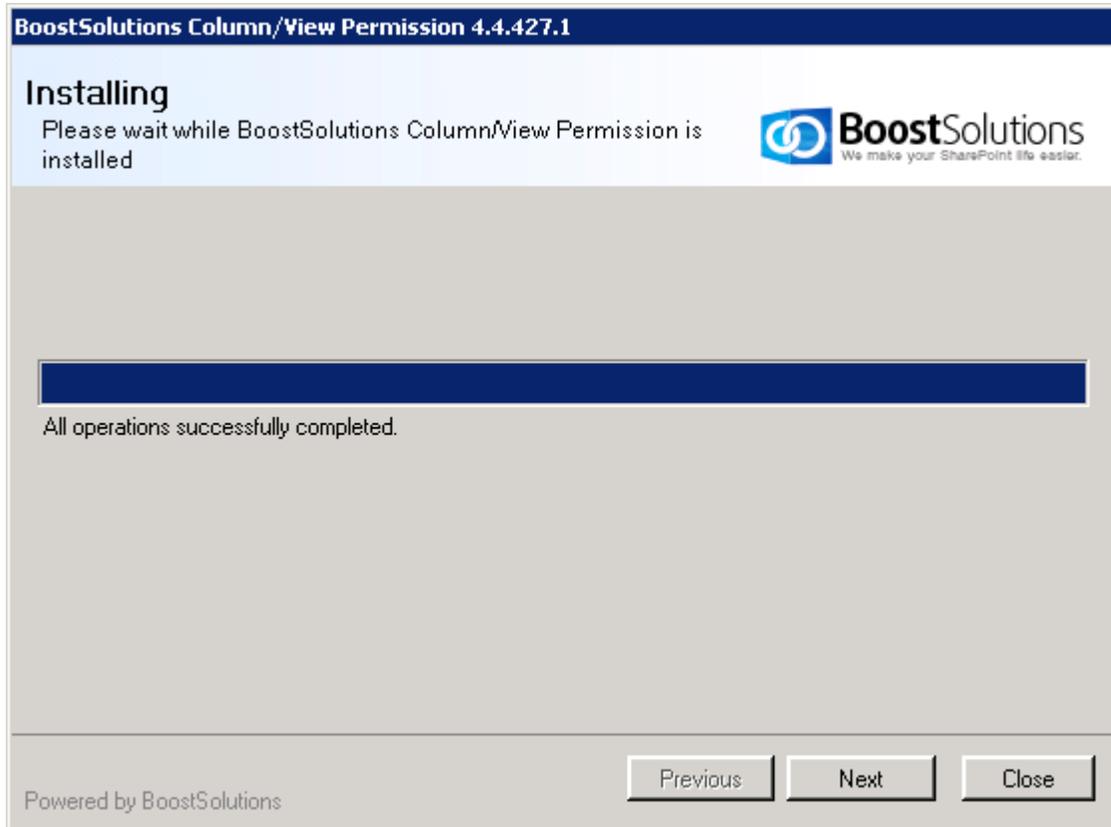

6. Then, you can see the installation details. And click **Next**.
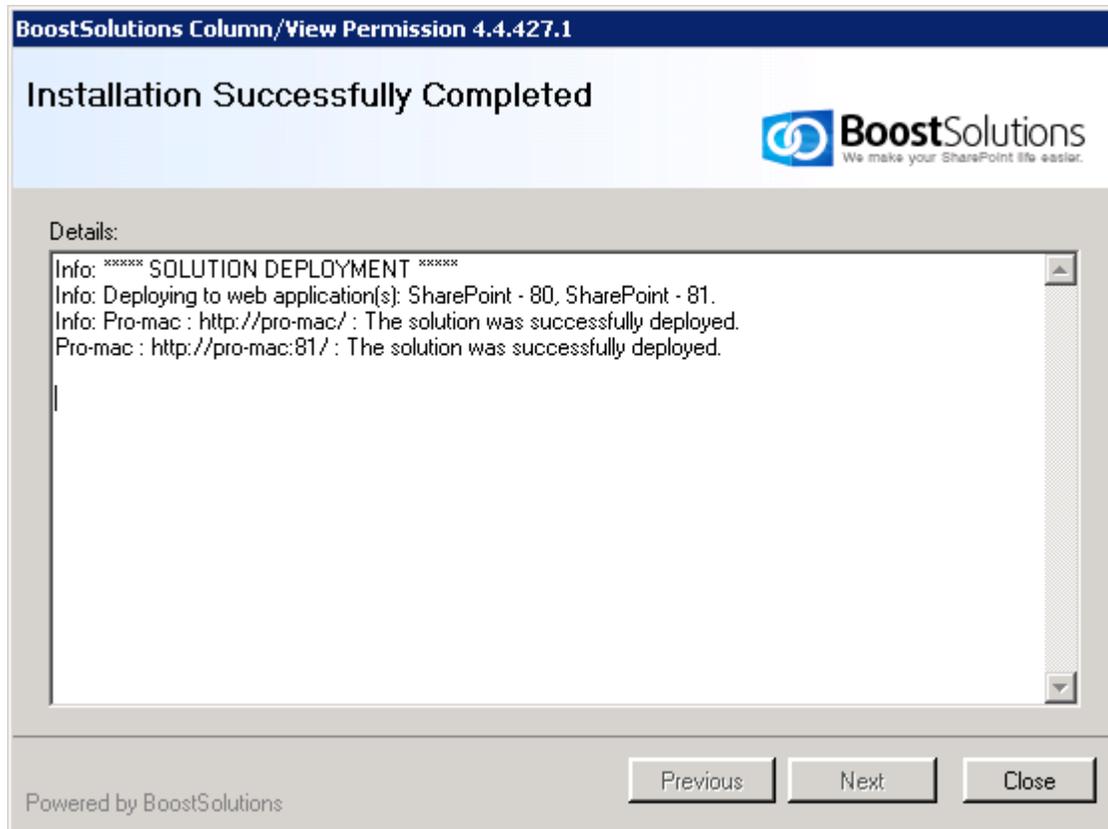

Note: You need to install Column View Permission for Web Service on each web front end after the installation finished.

3.5 Install Column View Permission for Web Service

1. In Permission Manager install wizard, select **Column View Permission for Web Service** and click **Install**.
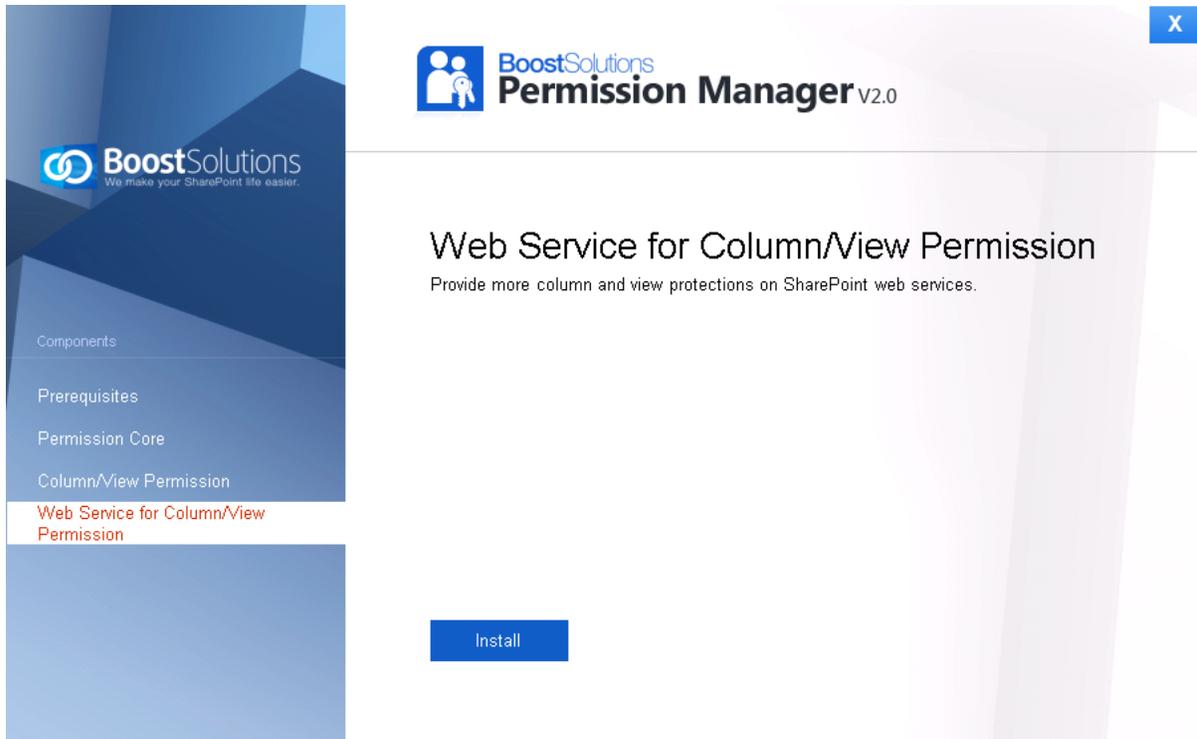

2. The setup wizard appears, click **Next** button.
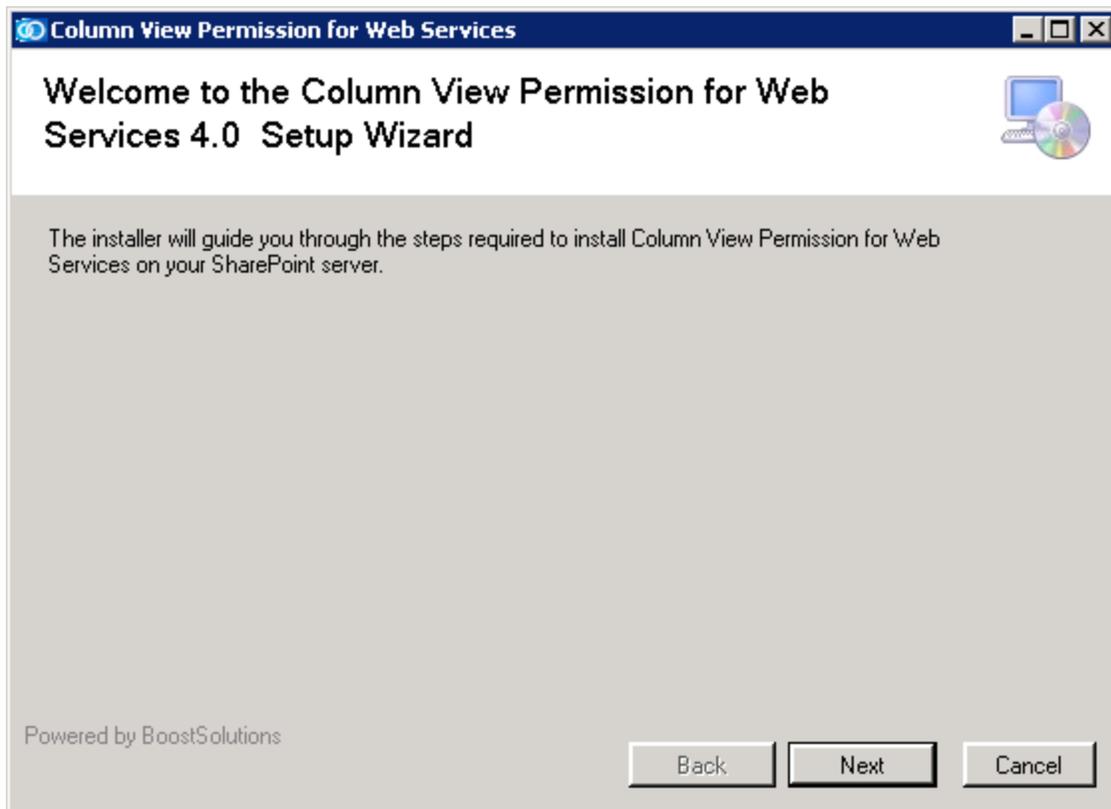

2. After confirming to install Column View Permission for Web Service in the wizard, click **Next**.
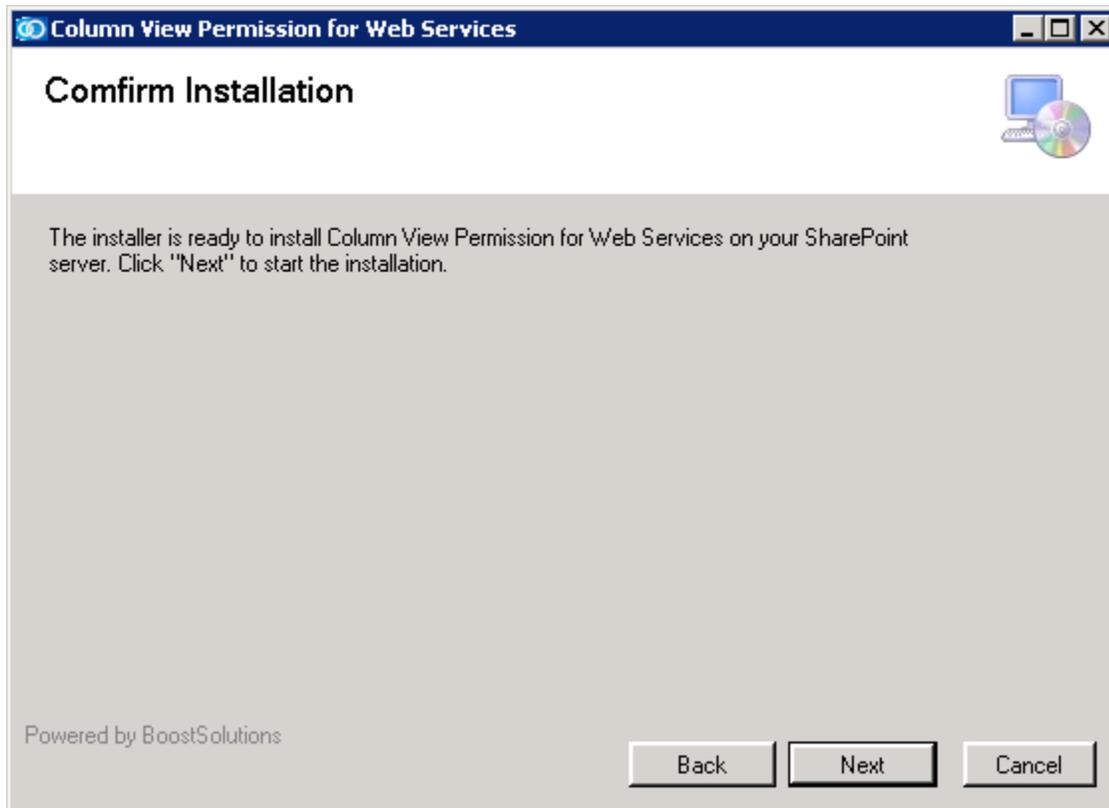

3. Upon completion of the installation, details are displayed showing on which web front end the Column/View Permission for Web Service has been installed.
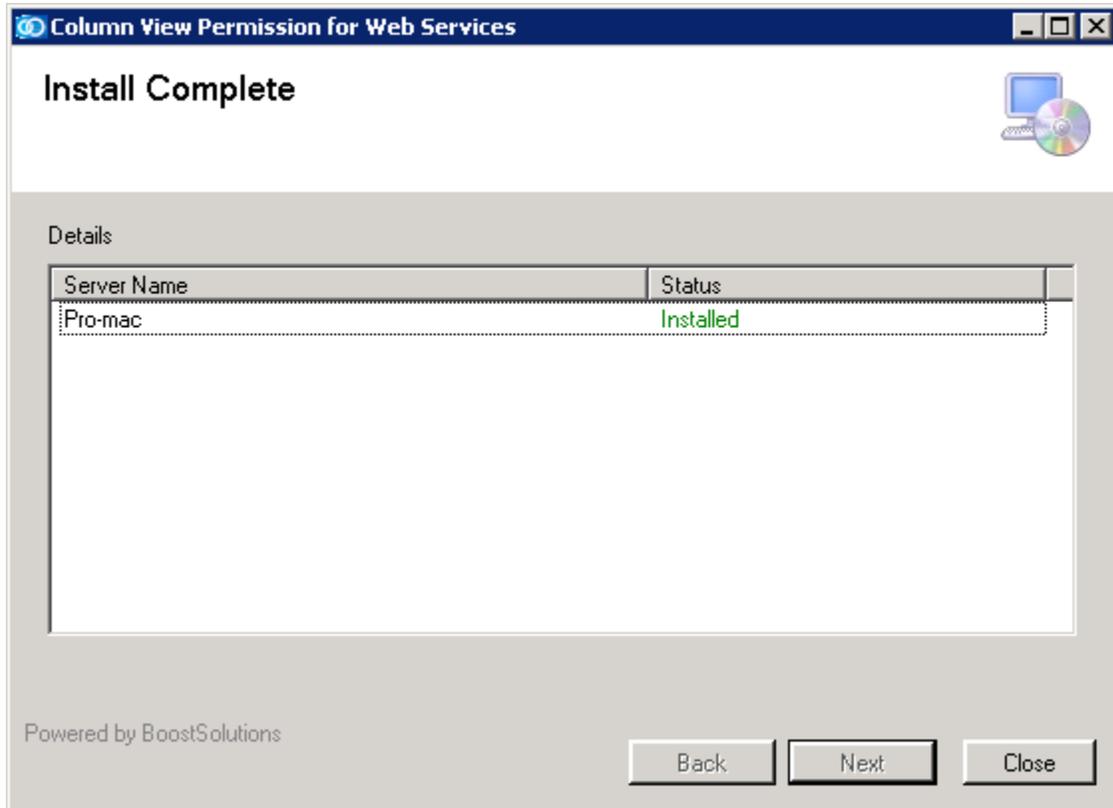

4. Then, repeat above steps to install Column View Permission for Web Service on each web front end in the SharePoint farm.

4. Access Permission Manager

1. After installation, open a browser and enter: http://<machine>: 8787

   Where <machine> is the host name or IP address of the machine running SharePoint services. If the default port number has been changed from 8787, enter the new port number.

2. Then, enter username (domain\user) and password, click **Sign In**.
